**Analysis of Android Cracking Tools and Investigations in  
Counter Measurements for Developers**

**Analyse von Android Crackingtools und Untersuchung  
geeigneter Gegenmaßnahmen für Entwickler**

Author:	Johannes Neutze, B. Sc.
Supervisor:	Prof. Dr. Uwe Baumgarten
Advisor:	Nils Kannengießer, M. Sc.
Submission Date:	March 15, 2015

I confirm that this master's thesis in informatics is my own work and I have documented all sources and material used.

Munich, March 15, 2015

Johannes Neutze, B. Sc.

# Glossary

**API** An Application Programming Interface (API) is a particular set of rules and specifications that a software program can follow to access and make use of the services and resources provided by another particular software program that implements that API .

**computer** is a machine that...

**valid device** a device which is allowed to run software specified by the license.

# Acronyms

**API** Application Programming Interface.

**TUM** Technische Universität München.

# 1 Introduction

sis is a text

## 1.1 Licensing

Was ist licensing?

Ziele von Licensing

was für möglichkeiten gibt es (lvl, amazon, samsung)

## 1.2 Motivation

Piracy

lose money from sale/IAP

lose ad revenues

others earn the money - ad ID replacement

no control at all when cracked and in other markets -> no fixes/updates (<https://youtu.be/TNnccRimhsI?t=>

for user: when downloading pirated apk, no idea what they changed (malware, stealing data, privacy, permissions)

wont notice any difference since in background

unpredicted traffic for your server, be prepared to block pirated traffic

cracking can lead to bad user experience, e.g. copied apps, mostly for paid apps

awesome algorithms can be stolen

similar problems with inapp billing

best way to counter: license verification libraries

encryption can be dumped from memory

generell piracy!!!

enthält als Abschluss SCOPE

## **1.3 Related Work**

related work

## 2 Foundation

sis is a text

### 2.1 Software Piracy

<http://www.xda-developers.com/piracy-testimonies-causes-and-prevention/>

#### 2.1.1 Overview

**What is Software Piracy?**

**History of Software Piracy**

**Forms of Software Piracy**

Release Groups, blackmarket, app beispiele, foren etc

#### 2.1.2 Threat to Developers

scahden für entwickler (ad id klau,)

#### 2.1.3 Risks to Users

malware, bad user experience

#### 2.1.4 Piracy on Android

Poor model, since self-signed certificates are allowed, 27 <http://newandroidbook.com/files/Andevcon-Sec.pdf>

<http://www.fiercedeveloper.com/story/preventing-android-applications-piracy-possible-requirements/>

2012-08-14 piracy umfrage on android

## 2.2 Android

sis is text

flow wie funktioniert android und warum ist es so einfach zu piraten

[https://net.cs.uni-bonn.de/fileadmin/user\\_upload/plohmann/2012-Schulz-Code\\_Protection\\_in\\_Android.pdf](https://net.cs.uni-bonn.de/fileadmin/user_upload/plohmann/2012-Schulz-Code_Protection_in_Android.pdf)

### 2.2.1 Introduction

What is Android? Where is it used? When was it founded? Who does it belong to?

### 2.2.2 Evolution of the Android Compiler

sis is text

#### Java Virtual Machine

sis is text

#### Dalvik Virtual Machine

sis is text

#### Android Runtime

im Moment abwärtskompatibilität dex in oat (tools zum extrahieren nennen)

### 2.2.3 Basics of Android

sis is text

### 2.2.4 Root on Android

what is it? how is it achieved? what can i do with it? (good/bad sides)

Android insecure, can be rooted and get apk file <http://androidvulnerabilities.org/all> search for root

## 2.3 License Verification Libraries

This chapter contains the LVL which will be looked at

What is a lvl? why are they used? connection to store

<http://www.digipom.com/how-the-android-license-verification-library-is-lulling-you-into-a>

### 2.3.1 Amazon

Amazon DRM

#### Implementation

sis is text

#### Functional Principle

sis is text

#### Example

anhand eigener app

### 2.3.2 Google

License Verification Library

<http://www.digipom.com/how-the-android-license-verification-library-is-lulling-you-into-a>

related <https://developers.google.com/games/services/android/antipiracy>

[http://android-developers.blogspot.de/2010/09/securing-android-lvl-applications.](http://android-developers.blogspot.de/2010/09/securing-android-lvl-applications.html)

html

#### Implementation

sis is text

#### Functional Principle

how does google license check work [http://android.stackexchange.com/questions/](http://android.stackexchange.com/questions/22545/how-does-google-plays-market-license-check-work)

22545/how-does-google-plays-market-license-check-work

sis is text

### **Example**

anhand eigener app

### **2.3.3 Samsung**

Zirconium

### **Implementation**

sis is text

### **Functional Principle**

sis is text

### **Example**

anhand eigener app

## **2.4 Reengineering Tools**

main tools

<https://mobilesecuritywiki.com/>

[https://net.cs.uni-bonn.de/fileadmin/user\\_upload/plohmann/2012-Schulz-Code\\_Protection\\_in\\_Android.pdf](https://net.cs.uni-bonn.de/fileadmin/user_upload/plohmann/2012-Schulz-Code_Protection_in_Android.pdf)

### **2.4.1 Reengineering**

[https://net.cs.uni-bonn.de/fileadmin/user\\_upload/plohmann/2012-Schulz-Code\\_Protection\\_in\\_Android.pdf](https://net.cs.uni-bonn.de/fileadmin/user_upload/plohmann/2012-Schulz-Code_Protection_in_Android.pdf)

### **2.4.2 Dex**

mein custom script erklären

### **2.4.3 baksmali**

<https://github.com/JesusFreke/smali>

#### 2.4.4 Java

##### Androguard

<https://github.com/androguard/androguard>

##### jadx

<https://github.com/skylot/jadx>

#### 2.4.5 Diff

<https://wiki.ubuntuusers.de/diff>

- N: Treat absent files as empty; Allows the patch create and remove files.
  - a: Treat all files as text; Allows the patch update non-text (aka: binary) files.
  - u: Set the default 3 lines of unified context; This generates useful time stamps and context.
  - r: Recursively compare any subdirectories found; Allows the patch to update subdirectories.
- script erklären

can also be used to learn the code -> was nacher das allgemeine problem ist

## 3 Cracking Android Applications with LuckyPatcher

<http://lucky-patcher.netbew.com/>

### 3.1 What is LuckyPatcher and what is it used for?

wer hat ihn geschrieben?

auf welcher version basiere ich

su nicht vergessen

was kann er alles

was schauen wir uns an?

install apk from palystore -> have root -> open lucky -> chose mode

similar cracking tools:

or manual: decompile and edit what ever you want

### 3.2 Operation

wo arbeitet er?

warum dex und nicht odex anschauen?

patterns und patching modes grob erklären (modi von luckypatcher die verschiedene operationen (pattern) auf app anwenden) => vorgehensweise zur

### 3.3 What patterns are there and what do they do?

was greift jedes pattern an? wie wird der mechanismus ausgeklingt? was ist das result?

### 3.4 What are Patching Modes are there and what do they do?

kombination von patterns.

welche modes gibt es? welche patterns benutzen sie?

welche apps getestet und welche results?

### **3.5 Learnings from LuckyPatcher**

was fällt damit weg?

erklären warum (2) 5.1.2 Opaque predicates zb nicht geht, da auf dex ebene einfach austauschbar

simple obfuscation for strings? x -> string (damit name egal)

## 4 Counter Measurements for Developers

am besten mit example

### 4.1 Tampering Protection

Environment and Integrity Checks

siehe masterarbeit 2

just as easy to crack as LVL when you know the code

evtl create native versions because harder to crack

should work for amazon/lvl/samsung -> beweis! (amazon die signature den die seite vorgibt?)

#### 4.1.1 Prevent Debuggability

sis is text

#### 4.1.2 Root Detection

<http://stackoverflow.com/questions/10585961/way-to-protect-from-lucky-patcher-play-licens>

SafetyNet provides services for analyzing the configuration of a particular device, to make sure that apps function properly on a particular device and that users have a great experience. <https://developer.android.com/training/safetynet/index.html>  
Checking device compatibility with safetynet

#### 4.1.3 LuckyPatcher Detection

As the example shows, this check is not only a solution to prevent the application from running when LuckyPatcher is present on the device. The screening can be expanded to check for the installation of any other application, like black market apps or other cracking tools as the code example Listings 4.1 shows.

<http://stackoverflow.com/questions/13445598/lucky-patcher-how-can-i-protect-from-it>  
<http://android-onex.blogspot.de/2015/07/anti-piracy-software-activated-solved.html>

```
9  public static boolean checkInstall(final Context context) {
10      boolean result = false;
11      String[] luckypatcher = new String[]{
12          // Lucky patcher
13          "com.dimonvideo.luckypatcher",
14          // Another lucky patcher
15          "com.chelpus.lackypatch",
16          // Black Mart alpha
17          "com.blackmartalpha",
18          // Black Mart
19          "org.blackmart.market",
20          // Lucky patcher 5.6.8
21          "com.android.vending.billing.InAppBillingService.LUCK",
22          // Freedom
23          "cc.madkite.freedom",
24          // All-in-one Downloader
25          "com.allinone.free",
26          // Get Apk Market
27          "com.repodroid.app",
28          // CreeHack
29          "org.creeplays.hack",
30          // Game Hacker
31          "com.baseappfull.fwd"
32      };
33
34      for (String string : luckypatcher) {
35          if(checkInstallerName(context, string)){
36
37              }
38              result = checkInstallerName(context, string);
39
40              if (result) {
41                  android.os.Process.killProcess(android.os.Process.myPid());
42              }
43          }
44
45      return result;
46  }
47
48  private static boolean checkInstallerName(Context context, String string) {
49      PackageInfo info;
50      boolean result = false;
```

```
51
52     try {
53         info = context.getPackageManager().getPackageInfo(string, 0);
54
55         if (info != null) {
56             android.os.Process.killProcess(android.os.Process.myPid());
57             result = true;
58         }
59
60     } catch (final PackageManager.NameNotFoundException ignored) {
61     }
62
63     if (result) {
64         android.os.Process.killProcess(android.os.Process.myPid());
65     }
66     return result;
67 }
68 }
```

Listing 4.1: Partial Listing

#### 4.1.4 Sideload Detection

<http://stackoverflow.com/questions/10809438/how-to-know-an-application-is-installed-from->

#### 4.1.5 Signature Check

once in code

save to use signature in code?

<http://forum.xda-developers.com/showthread.php?t=2279813&page=5>

#### 4.1.6 Remote Verification and Code nachladen

certificate an server, get signature and send to server

content direkt von server laden (e.g. all descriptions, not sure if dex possible)

e.g. account auf seite erstellen, encrypted dex ziehen der von loader stub geladen wird (like packer) kann wiederum dann gezogen werden und dann als custom patch verteilt werden

## 4.2 LVL Modifications

siehe masterarbeit 2 <http://www.digipom.com/how-the-android-license-verification-library-is-1>  
What can I do?

### 4.2.1 Modify the Library

google

### 4.2.2 Checken ob ganzer code abläuft und dann nacheinander elemente aktivieren

master1 - testen

damit die ganzen blöcke durchlaufen werden müssen

### 4.2.3 dynamische Codegeneration

## 4.3 Prevent Reengineering

<https://blog.fortinet.com/post/how-android-malware-hides>  
<http://www.hotforsecurity.com/blog/mobile-app-development-company-fights-off-android-malware>  
html

### 4.3.1 Basic Breaks for Common Tools

pros and cons sagen?

<https://github.com/strazzere/APKfuscator>

<http://www.strazzere.com/papers/DexEducation-PracticingSafeDex.pdf>

<https://youtu.be/Rv8DfXNYnOI?t=811>

### Filesystem

make classname to long

<https://youtu.be/Rv8DfXNYnOI?t=985> works except for the class

breaks only baksmali

### **Inject bad OPcode or Junkbytes**

#### **JUNKBYTES**

use bad opcode in deadcode

code runs but breaks tools

put it into a class you do not use -> care proguard, it will not use it since it is not included

-> fixed...

<https://youtu.be/Rv8DfXNYnOI?t=1163>

reference not inited strings

<https://youtu.be/Rv8DfXNYnOI?t=1459>

### **Throw exceptions which are different in dalvik than in java**

recursive try/catch? -> valid dalvik code

<https://youtu.be/Rv8DfXNYnOI?t=1650>

### **Increase headersize**

you have to edit every other offset as well

<https://youtu.be/Rv8DfXNYnOI?t=1890>

dexception, dex within a dex by shifting

this is a packer/encrypter

slowdown automatic tools

<https://youtu.be/Rv8DfXNYnOI?t=1950>

### **Endian Tag?**

reverse endian

breaks tools works on device (odex)

lot work for little gain

<https://youtu.be/Rv8DfXNYnOI?t=2149>

### **4.3.2 Optimizers and Obfuscators**

Obfuscators/Optimizers definition

remove dead/debug code

potentially encrypt/obfuscate/hide via reflection

<https://youtu.be/6vFcEJ2jg0w?t=243>

### **Relfection**

<https://www.youtube.com/watch?v=Rv8DfXNYnOI>  
irgendwo erklären

### **Proguard**

<https://youtu.be/6vFcEJ2jg0w?t=419>  
[https://net.cs.uni-bonn.de/fileadmin/user\\_upload/plohmann/2012-Schulz-Code\\_Protection\\_in\\_Android.pdf](https://net.cs.uni-bonn.de/fileadmin/user_upload/plohmann/2012-Schulz-Code_Protection_in_Android.pdf)  
<http://developer.android.com/tools/help/proguard.html>  
optimizes, shrinks, (barely) obfuscates -> free, reduces size, faster  
gutes bild <https://youtu.be/TNnccRimhsI?t=1360>  
removes unnecessary/unused code  
merges identical code blocks  
performs optimizations  
removes debug information  
renames objects  
restructures code  
removes linenumbers -> stacktrace annoying  
<https://youtu.be/6vFcEJ2jg0w?t=470>  
->hacker factor 0  
does not really help

### **Dexguard**

master2  
OVERVIEW  
son of proguard  
the standard protection  
optimizer  
shrinekr  
obfuscator/encrypter, does not stop reverse engineering  
<https://youtu.be/6vFcEJ2jg0w?t=643>  
WHAT DOES IT DO  
everything that proguard does  
automatic reflection

string encryption  
asset/library encryption  
class encryption(packign)  
application tamper protection  
file->automatic reflection->string encryption->file  
<https://youtu.be/6vFcEJ2jg0w?t=745>  
class encryption= packer, unpackers do it most of the time in few seconds, aber aufwand  
auf handy, nicht so einfach wie pattern in luckypatcher  
CONS  
may increase dex size, memory size; decrease speed  
removes debug information  
string, etc encryption  
best feature: automatic reflection with string encryption  
reversible with moderate effort  
hacker protection factor 1

### **Allatori**

<http://www.allatori.com/clients/index.php>  
[https://net.cs.uni-bonn.de/fileadmin/user\\_upload/plohmann/2012-Schulz-Code\\_Protection\\_in\\_Android.pdf](https://net.cs.uni-bonn.de/fileadmin/user_upload/plohmann/2012-Schulz-Code_Protection_in_Android.pdf)  
WHAT DOES IT  
name obfuscation  
control flow flattening/obfuscation  
debug info obfuscation  
string encryption  
RESULT  
decreases dex size, memory, increases speed  
removes debug code  
not much obfuscation  
Proguard+string encryption  
easily reversed  
hacker protection factor 0.5  
<https://youtu.be/6vFcEJ2jg0w>

### **4.3.3 Protectors and Packers**

from malware

### **APKprotect**

stub fixes broken code which is normally not translated by tools, breaks static analysis

<https://youtu.be/6vFcEJ2jg0w?t=347>

<https://youtu.be/6vFcEJ2jg0w>

chinese protector

also known as dexcrypt, appears active but site down, clones might be available

anti-debug, anti-decompile, almost like a packer

string encryption

cost ???

tool mangles code original code

-modifies entrypoint to loader stub

-prevents static analysis

during runtime loader stub is executed

-performs anti-emulation

-performs anti-debugging

-fixes broken code in memory

FUNCTION

dalvik optimizes the dex file into memory ignoring bad parts

upon execution dalvik code initiates, calls the native code

native code fixes odex code in memory

execution continues as normal

RESULT

slight file size increase

prevents easily static analysis

hard once, easy afterwards

easily automated to unprotect

still has string encryption (like DexGuard, Allatori) afterwards

not much iteration in the last time, do not know if still alive

hacker protection factor 3, no public documentation, but every app is the same

### **4.3.4 Packers**

break static analysis tools, you have to do runtime analysis

like UPX, stub application unpacks, decrypts, loads into memory which is normally hidden from static analysis

<http://www.fortiguard.com/uploads/general/Area41Public.pdf>

<https://books.google.de/books?id=ACjUCgAAQBAJ&pg=PA372&lpg=PA372&dq=ijiami+>

integrity&source=bl&ots=NTf7YaqJiZ&sig=M5GKDCcQB5dcwXR3hjtIv8pMlAA&hl=de&sa=X&ved=0ahUKEwjH3umt1b3JAhXGLA8KHYhwDGsQ6AEIMDAC#v=onepage&q=ijiami%20integrity&f=false

concept erklären und dann die beispiele nennen, nicht mehr aktiv/gecracked aber prinzip ist gut

#### **hosedex2jar**

<https://youtu.be/6vFcEJ2jg0w?t=1776>  
PoC packer  
not available for real use  
appears defunct  
near zero ITW samples  
mimics dexception attack from dex education 101  
FUNCTION  
encrypts and injects dexfile into dex header (deception)  
very easy to spot  
very easy to decrypt, just use dex2jar  
static analysis does not work since it sees the encrypted file  
on execution loader stub decrypts in memory and dumps to file system  
loader stub acts as proxy and passes events to the dex file on system using a dexClassLoader  
RESULT  
simple PoC  
slight file size increase  
attempts to prevent static analysis - kind of works  
lots of crashing  
easily automated to unpack

easy to reverse, good for learning  
hacker protection factor 0.5

### **Pangxie**

<https://youtu.be/6vFcEJ2jg0w?t=1982>

anti-debug

anti-tamper

appears to be defunct product

little usage/samples ITW

FUNCTION

<https://youtu.be/6vFcEJ2jg0w?t=2040>

encrypts dex file and bundles as asset in APK

very easy to find, logcat has too much information

dalvik calls JNI layer to verify and decrypt

easy to reverse, both dalvik and native, excellent for beginners to Android and packers

aes used only for digest verification

easily automated, 0x54 always the key

or dynamically grab app\_dex folder

slightly increase file size

prevents static analysis - though easy to identify

uses static 1 byte key for encryption

easily automated to unpack

very easy to reverse, good for learning

good example of an unobfuscated packer stub for cloning

hacker protection factor 1.5

only working till <4.4

simple packer, increase encryption with key, do not just dump on filesystem

### **4.3.5 BANGCLE**

anti-debugging

anti-tamper

anti-decompilation

anti-runtime injection

online only service, apk checked for malware

detected by some anti virus due to malware

cost 10k

no one has done it before...

stopped working on 4.4

FUNCTION

dalvik execution talks launched JNI

JNI launches secondary process

chatter over PTRACE between the two processes

newest process decrypts dex into memory

original dalvik code proxies everything to the decrypted dex

RESULT

well written, lots of anti-\* tricks

seems to be well supported and active on development

does a decent job on online screening - no tool released for download (though things clearly to slip through)

not impossible to reverse and re-bundle packages

current weakness (for easy runtime unpacking) is having a predictable unpacked memory location

hacker protect faktor 5

probably best tool out there but lag when updating since online approval

## 4.4 External Improvements

### 4.4.1 Service-managed Accounts

<https://youtu.be/TNnccRimhsI?t=1636>

check on server what content should be returned or logic on server

kann man einen lagorithus haben um rauszufinden was man auslagern kann?

if not possible remote code loading

<https://www.youtube.com/watch?v=rSH6dnUTDZo> was ist dann geschützt? content, servers, time constrained urls, obfuscation by using reflection combined with SE -> makes slow but no static analysis

very very slow, e.g 10kHz so no big calculations possible  
250bytes, 200ms

[http://amies-2014.international-symposium.org/proceedings\\_2014/Kannengiesser\\_Baumgarten\\_Song\\_AmiEs\\_2014\\_Paper.pdf](http://amies-2014.international-symposium.org/proceedings_2014/Kannengiesser_Baumgarten_Song_AmiEs_2014_Paper.pdf)

#### 4.4.2 ART

art hat masschinen coed  
wenn reengineerbar dann nicht gut

#### 4.4.3 Secure Elements

new section trusted execution environment trusttronic letzte conference samsung Knox  
->gelten eher sicher

## 5 Evaluation

Evaluation der vorgeschlagenen punkte mit pro cons und umsetzbarkeit

<http://forum.xda-developers.com/showthread.php?t=2279813>

### 5.1 Tampering Protection

#### 5.1.1 Prevent Debuggability

#### 5.1.2 Root Detection

#### 5.1.3 LuckyPatcher Detection

already in some roms

[https://www.reddit.com/r/Piracy/comments/3gmxun/new\\_way\\_to\\_disable\\_the\\_antipiracy\\_setting\\_on/](https://www.reddit.com/r/Piracy/comments/3gmxun/new_way_to_disable_the_antipiracy_setting_on/)

<https://github.com/AlmightyMegadeth00/AntiPiracySupport>

[https://www.reddit.com/r/Piracy/comments/3eo8sj/antipiracy\\_measures\\_on\\_android\\_custom\\_roms/](https://www.reddit.com/r/Piracy/comments/3eo8sj/antipiracy_measures_on_android_custom_roms/)

example roms <http://www.htcmania.com/archive/index.php/t-1049040.html>

<https://forums.oneplus.net/threads/patch-disable-the-antipiracy-feature-on-all-roms-sur-334772/>

#### 5.1.4 Sideload Detection

#### 5.1.5 Signature Check

maps checks for signature?

<http://stackoverflow.com/questions/13582869/does-lucky-patcher-resign-the-app-it-patches->

<https://developers.google.com/android/guides/http-auth> <http://forum.xda-developers.com/showthread.php?t=2279813&page=5>

### 5.1.6 Remote Verification and Code nachladen

trotzdem doof wenn einmal geladen kann man das file extrahieren etc

## 5.2 Prevent Reengineering

### 5.2.1 Basic Breaks for Common Tools

Filesystem

Inject bad OPCODE

Throw exceptions which are different in dalvik than in java

Increase headersize

Endian Tag?

### 5.2.2 Optimizers and Obfuscators

Relfection

Proguard

Dexguard

Allatori

Dexprotector

### 5.2.3 Protectors

APKprotect

### 5.2.4 Packers

already cracked [https://www.google.de/search?q=hosedex2jar&oq=hosedex2jar&aqs=chrome..69i57j69i60j69i59j69i60l3.1680j0j7&sourceid=chrome&es\\_sm=91&ie=UTF-8](https://www.google.de/search?q=hosedex2jar&oq=hosedex2jar&aqs=chrome..69i57j69i60j69i59j69i60l3.1680j0j7&sourceid=chrome&es_sm=91&ie=UTF-8)

<http://www.hotforsecurity.com/blog/mobile-app-development-company-fights-off-android-malware.html>

hosedex2jar

Pangxie

### 5.2.5 BANGCLE

## 5.3 External Improvements

sis is text

### 5.3.1 Service-managed Accounts

### 5.3.2 ART

art hat oat files aber die haben dex files

### 5.3.3 Secure Elements

new section trusted execution environment trusttronic letzte conference samsung knox  
->gelten eher sicher

## 6 Conclusion

auch wichtig weil wenn crackable dann upload zu stores und dann malware

<http://www.hotforsecurity.com/blog/mobile-app-development-company-fights-off-android-malware-with-obfuscation-tool-3717.html>

### 6.1 Summary

sis is text alles hilft gegen lucky patcher auf den ersten blick, jedoch custom patches können es einfach umgehen -> deswegen hilft nur reengineering schwerer zu machen  
every new layer is another complexity

### 6.2 Discussion

sis is text <http://www.digipom.com/how-the-android-license-verification-library-is-lulling-you>

What Google should have really done

<http://programmers.stackexchange.com/questions/267981/should-i-spend-time-preventing-piracy>

You are asking the wrong question. Technical safeguards such as proguard are a must

but are trying to solve the problem the hard way.

content driven <http://stackoverflow.com/questions/10585961/way-to-protect-from-lucky-patcher>

google sagt <http://android-developers.blogspot.de/2010/09/securing-android-lvl-applications.html>

### 6.3 Future Work

art?

smart cards

google vault

all papers with malware and copyright protection is interesting since they also want to

hide their code
